This DNA encodes a human secreted protein. The specification provides secreted protein sequences (AAW63691 to AAW6369) encoded by the mucleic acid sequences shown in AAV43610. The invention provides a method of identifying a secreted polypeptide which is modified by rough microsomes. The secreted proteins can be used in assays to determine contrivities, such as cytokine, cell proliferation, or cellular differentiation activity, chemotactic or chemokinetic activity, nemostation activity, receptor/ligand activity, tumour inhibition, or thrombolytic activity, receptor/ligand activity, tumour inhibition, or canti-inflammatory activity. The proteins activity, tumour inhibition, or anti-inflammatory activity. The protein activity, tumour inhibition, or continuous activity in protein expression. They activity to complete the protein activity to in protein expression. They can be used in protein interaction assays, to identify ligands or binding proteins.

Compounds which affect the biological activities of the secreted proteins or their ability to interact with specific ligands can be identified using the proteins in screening assays. The proteins and antibodies that bind specifically to the protein can also be used to design diagnostic tests and therapeutic compositions for diseases which may be associated with altered expression of these proteins. Fusion proteins comprising, especially to transmembrane domains of the proteins can be contrained to there protein domains to cellular membrane or they can be associated contrained.
                                                                                                                                            ò
                                                                                                                            Secreted human polypeptides - having cytokine, cell proliferation differentiation, activin or inhibin, tumour inhibition or anti-inflammatory activities.

```
hepatocyte growth factor (HGF) activator (HGFA), which has a molecular weight of about 40 kD when determined by SDS-PAGE. The inhibitor, which was isolated from the human cancer cell line MKM45, can be used as an in vivo or in vitro regulatory factor for HGF or HGFA. It can also be used to raise antibodies, useful in kinetic studies of the inhibitor, or as
                                                                                                                                                                                                                                                                                                                     Inhibition, inhibitor, protease, hepatocyte, growth factor, activation, activator; human, cancer, cell line, MEM45, regulation, regulator, antibody, kinetic study, assay standard, ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New hepatocyte growth factor activator inhibitor and DNA - regulates hepatocyte growth factor and/or HGF activator in vivo or in vitro, and are used in kinetic studies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes an inhibitor of the protease activity of

This invention describes a preventive and/or treating agent for the diseases caused by the exasperation of activity of protease of plasma kallikrein, plasmin, unokinase and trypsin. The agent contains a protein, HAI-1 which has the following properties, M.W. of ca. 40,000 to 57,000 balton by SDS-PAGE and an activity of inhibiting protease activity of hepatocyte growth factor (HGP) activator. The HGP inhibiting activity of the protein is specific. HAI-1 shows a high inhibiting activity of plasmin, trypsin, HGF activator and plasma kallikrein but substantially no inhibiting activity on thrombin. This sequence encodes the human HAI-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1222 TGTTATGGCAACAACAACTTTGAGGAAGAGCGCGCGCGGGGCCTCGAGTCTTGTCGCGGC 1281

Human protease associated proteins are expressed in cancer and immortalised cell lines and tissues associated with inflammation and and immore asponse, and so appear to play a role in cell proliferative and immune disorders. The sequences can be used to diagnose, treat or prevent cell proliferative and immune disorders, including actinic Keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary

The present sequence is that of cDNA clone DNA35880-1160 (ATCC 209379)
encoding novel human immunomodulator protein PR0256 (UN0223) (see
encoding novel human immunomodulator protein PR0256 (UN0223) (see
chab20113). The clone was isolated from a human placenta cDNA library. The
predicted protein (58 kDa, pl 6.22) shows homology to human bikunin,
indicating protease inhibitor activity. The invention provides
comprising the proteins of the proteins of these
proteins or their agonists are useful for increasing infiltration of
inflammatory cells into a tissue of a mammal, stimulating or enhancing an
immune response in a mammal, or increasing the proliferation of T-
lymphocytes in a mammal, or increasing the proliferation of T-
lymphocytes in a mammal, or increasing the proliferation of T-
lymphocytes in a mammal in response to an antigen. Claimed compositions
comprising the PRO polypeptide or its antagonist have the opposite
effect. A claimed method for treating an immune related disorder, such as
a T cell disorder, involves administering the PRO polypeptide, an agonist
antibody or an antagonist antibody. The disorder is selected from
systemic lupus erythematosus, rheumatoda arthitis, osteoarthritis,
iuvenile chronic arthritis, spondyloarthropathy, systemic sclerosis,
dispathic inflammatory myopathy, Sjognen's syndrom, systemic
chrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal
disease, demphatitis, primary biniary cirrhosis, graanlomatous
chromic active hepatitis, primary biniary cirrhosis, graanlomatous
hepatitis, inflammatory bowel disease (ulcerative

colitis and Crohn's disease), gluten-sensitive enteropathy, Whipple's disease, (auto)immune-mediated skin diseases (such as bullous skin disease, erythem amultiforme and psoriasis), allergic diseases (such as sthma, allergic rhinitis, atopic dermatitis, food hypersensitivity and urticaria), immunologic diseases of the lung and transplantation diseases (such as graft rejection and graft-versus-host diseases) (all claimed). Claimed methods of diagnosting these disorders comprise detecting the level of expression of the PRO gene. Also claimed are a method of identifying a compound capable of inhibiting the expression or activity of the PRO polypeptide, vectors, host cells, antibodies and a method of stimulating the proliferation of T-lymphocytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1456

The present invention relates to PR0256 or its agonist/antagonist may be used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, especially a human with cardiac hypertrophy, trauma, a type of tumour or age-related macular degeneration. PR0256 may be administered together with a cardiovascular endothelial, or angiogenic agent, a creation to the search inhibitory agent, or a cytocoxic agent. PR0256 may also be used to treat the disorders above, preferably through administration via ex vivo gene therapy. PR0256 or its agonist may be used to inhibit endothelial cell growth, angiogenesis or protease activity of a hepatocyte growth factor, whereas an antagonist of PR0256 may be used to stimulate endothelial cell growth, angiogenesis or protease activity of a hepatocyte growth factor. Stimulation or inhibition of the protease activity of a hepatocyte growth factor is preferably carried out where a mammal has a cardiovascular, endothelial, or renal injury or a restinosis disorder. The present sequence is human hepatocyte growth factor activator inhibitor, PR0256 cDNA
                                                                                                      Human, PRO256 protein, cardiovascular, endothelial, anglogenic disorder, cardiac hypertrophy, trauma, cardiant, age-related macular degeneration, gene therapy, anglogenesis, protease activity, hepatocyte growth factor, peripheral vascular disease, hepatic, renal injury, nephrotropic, tumour, restinosis, tranquillizer, vulnerary; cytostatic, hepatotropic, ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the isolation of novel human PRO polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, and properties or anti-pRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagil, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy, ABK40254-ABK40288 encode for the human PRO polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 PheProSerAsplysGlyHisCysValAspleuProAspThrGlyLeuCysLysGluSer 80
                                                                                                                                                                                                                                                                                                                                                                        Thirty five nucleic acids encoding PRO polypeptides, useful for treating benign or malignant tumors, leukemias and lymphoid malignancies, inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MetGluArgArgHisProValCysSerGlyThrCysGlnProThrGlnPheArgCysSer 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB85003. The PRO proteins and polymucleotides have cardiant, cytostatic, artianglogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polymucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polymucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the

This invention relates to the cDNA and protein sequences of novel
secreted and transmembrane polypeptides PRO polypeptides. The invention
comprises a tethod for producing the proteins of the invention by
recombinant means and antibodies specific for the protein of the
invention. The antibody may be used for detecting the PRO proteins of the
invention and may be used to modify their activity. Polymuclectides may
be used as hybridisation probes for a cDNA library to isolate the full-
compress for mapping the gene which encodes that PRO and for genetic
analysis of individuals with genetic disorders, in assays to identify
other proteins or molecules involved in binding reaction, to generate
the proteins or molecules involved in binding reaction, to generate
the charmans or knock-out animals which in turn are useful in the
development and screening of therapeutically useful reagents, for
chromosome identification, and tiseum typing. The PRO polypeptides are
electrophoresis purposes. The sequences may also be used to detect
overexpression on PRO polypeptides in cancerous tumours and for screening
for differentially expressed genes using microarray technology. The
invention
                                                                                                                                                                        New PRO polypeptides and polynucleotides encoding the polypeptides, useful in gene therapy, chromosome identification, tissue typing, or genetic analysis of individuals with genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, mycoardial infarctions, thromopolhebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               81 IleProArgTrpTyrTyrAsnProPheSerGluHisCysAlaArgPheThrTyrGlyGly 100

invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TYP-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, cervical and liver tumours). The detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as antisense RNA and DNR and in gene therapy. The polymucleotides may also antisense RNA and DNR and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful cuseful in the development and screening of therapeutically useful casedents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for inducing endothelial cells cut the formation and for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. This sequence represents a known of the the the invention represents a human PRO polynucleotide of the invention.

Claim 2; Fig 9; 308pp; English.

The invention relates to an isolated secreted/transmembrane (PRO)

C polypeptide, having at least 80% sequence identity to a sequence selected

from any one of the 57 amino acid sequences given in specification, or to

a sequence encoded by a nucleic acid molecule selected from any one of

the nucleic acids deposited under any of the ArC accession numbers given

C action specification, or a sequence having at least 80% identity to PRO

c lacking its associated signal peptide. Also included are vectors,

transformed host cells, anti-PRO antibodies, the nucleic acids encoding

PRO, PRO fusion proteins, inducing endothelial cell tube formation (by

administering PRO281, PRO360, PRO489, PRO499, PRO6308, PRO6000,

CC administering PRO281, PRO3093 or PRO34274 polypeptide or its agonist) and

CC an oligonucleotide probe derived from any one of the above mucleotide

Sequences. PRO6018 polypeptide is useful for stimulating the

proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080

CC and PRO21383 polypeptides are useful for stimulating the proliferation of

microvascular endothelial cells. PRO6011, PRO4487 and PRO6006

CC and PRO21383 polypeptides are useful for stimulating the proliferation of

microvascular endothelial cells. PRO6011, PRO4487 and PRO6006

CC polypeptides are useful for inhibiting the proliferation of human

CC detecting the presence of tumour in a mammal, including tumours of lung,

CC colon, breast, prostate, rectal, kidney and liver. PRO231, PRO1560,

CRO1019, PRO4499, PRO6309, PRO6000, PRO10275, PRO22031 and

CRO1019, PRO4499, PRO6309, PRO600, PRO10275, PRO22031 and

CRO1024274 polypeptides are useful for inducing endothelial cell tube

CC formation. PRO or the antibody are useful in the preparation of a

CC microvate probes are useful for inducing endothelial cell tube

CC formation. PRO or the antibody are useful in the preparation of a

CC microvate probes are useful for inducing endothelial cell as a

CC microvated gene, and as antisense probes. PRO 01990 profice sequences,

The invention relates to an isolated secretedy transmemorane (**rw) or the invention relates to an isolated sequence identity to a sequence selected from any one of from any one of the 57 animo acid sequences given in specification, or to a sequence encoded by a mucleic acid molecule selected from any one of the nucleic acids deposited under any of the ATCT accession numbers given in specification, or a sequence having at least 80% identity to PRO lacking its associated signal peptide. Also included are vectors, transformed host cells, anti-PRO antibodies, the nucleic acids encoding PRO, PRO islon proteins, inducing endothelial cell tube formation (by RMO islon proteins, inducing endothelial cell tube formation (by RMO islon proteins), inducing endothelial cell tube formation (by RMO islon). The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The truvention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for proliferate, rectal, kidney and liver tumours). The polymucleotides are useful in molecular biology, including uses as bybridisation probes, in chromosome and gene mapping, in generating antiense RNA and bNA and in generating the presence of the polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the classification for an expensive to the polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such a survey. For stimulating and inhibiting proliferation of human microvascular endothelial cells and for inducing endothelial cell tube for summans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1157 Aregaaagsceccarccagrerererescaecereresceceaeceaerescerecage 1216

This CDS clone is a part of a collection of human full length

circle, Palo Alto, California 94303, USA

This CDS clone is a part of a collection of human full length

Harvard Institute of Proteomics. Each CDS has been cloned in two

forms: with and without stop-codon (to allow fusion with C-terminal

tag). The CDS has been directionally cloned und the clone: 'ACC' after

sylvasion between the Sall and Hindill sites of the

pDNR-DUM. vector. Additional sequences in the clone: 'ACC' after

Sall site and before MTG' to provide Kozak consensus sequence;
'GG' after last codon and before Hindill site to maintain reading

frame. Clone distribution: http://bloinfo.clontech.com/orfclones.

This CDS clone is a part of a collection of human full length

This CDS clone is a part of a collection of human full length

Harvard institute of Proteomics. Each CDS has been cloned in two

forms: with and without stop-codon (to allow fusion with C-terminal

tag). The CDS has been directionally cloned using BD In-Fusion (TM)

cloning system between the Sall and HindIII sites of the pDRR-DUAL

vector. Additional sequences in the clone: 'ACC' after Sall site

and before 'ATC' to provide Kozak consensus sequence; 'GG' after

last codon and before HindIII site to maintain reading frame.

Clone distribution: http://bioinfo.clontech.com/orfclones.

28-PEB-2003 (Rel. 41, Last annotation update)
Kunitz-type protease inhibitor 1 precursor (Hepatocyte growth factor activator inhibitor type 1) (HAI-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Itch H., Kataoka H., Meng J.Y., Hamasuna R., Kitamura N., Koono M.
"Mouse hepatocyte growth factor activator inhibitor type 1 (HAI-1)
and type 2 (HAI-2) placental bikumin genes and their promoters.";
Blochim. Blophys. Acta 1519:99-95(2001)
- FUNCTION: Inhibitor of HGF activator (By similarity).
- SUBCELULIAR LOCATION: Secreted (By similarity).
- SUBCELULIAR Inhibitor contains two inhibitory domains.
- SIMILARITY: Contains 1 LDL-receptor class A domain.
- SIMILARITY: Contains 2 BPTI/Kunitz inhibitor domains.
                                                                                                                                                                                                                                                                                                                                                                                                                  Mus musculus (Mouse).

Togan distribution in rate of two members of the low-density

Togan distribution in rate of two members of the low-density

Togan distribution in rate of two members of the low-density and candid and calcium.

Togan distribution in mannogly-ossides and polymyrin B.

Togan distribution in main of the call membrane protein. Expressed in clawarde at the call surface.

Togan distribution in main of polymyrin in membrane protein. Expressed in clawarde at the call surface.

Togan distribution in main in soluble form is possibly derived by proximal tubule, lung, epididymis, yolk sac, among others.

Togan distribution in minine in BGF-like domains.

SIMILARITY: Contains 37 LDL-receptor class B domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. Aya K., Tanaka H., Seino Y.;
Kidney Int. S7:401-404(2000).

-!- FUNCTION: Seems to play a role in the development or function of the kidney glomerular filtration barrier. May anchor the podocyte slit diaphragm to the actin cytoskeleton.
-!- SUBUNIT: Interacts with podocin/NPHS2. Interacts with CD2AP C-terminal domain (By similarity).
-!- SUBCELILIAR LOCATION: Type I membrane protein (Potential).
Predominantly located at podocyte slit diaphragm between podocyte foot processes. Also associated with podocyte apical plasma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (ISOFORM 2), AND SUBCELLULAR LOCATION

THENDRAIN

TH
podocytes of the periphery of mature and developing glomeruli. PTM: Phosphorylated on tyrosine residues.
BISEASE: Defects in NPHS: are the cause of congenital nephrotic syndrome of the Finnish type (NPHS) or CNF) [MIM:256300]; an autosomal recessive disorder characterized by massive proteinuria in utero and nephrosis at birth.
SIMILARITY: Belongs to the immunoglobulin superfamily.
SIMILARITY: Contains 1 fibromectin type III domain.
SIMILARITY: Contains 8 immunoglobulin-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (POTENTIAL).
